

Hi! I am EZ!

EZ Manage is your helping hand to manage your NGO accounts. Let EZ help you to help others better.

EZ lets you know details and progress of your accounts and projects just by the click of a button.

EZ shows graphical views of your projects. We know a picture is worth a thousand words.

EZ was developed with one vision and that was to help simplify management of your projects. This lets you be more efficient at what you do and allow all booking keeping to EZ.

EZ Manage has nice features like:

Tabbed clustering of project related items : Projects, Instances, Success Story.

Generate dynamic buttons to list all items under a specific category.

Google charts for very good graphical charts.

Data being represented in different views for easier understanding.

Click on the charts to change the chart metric or the chart data itself.

EZ Manage defines a project as set of activities towards implementing a goal.

It defines an instance as a sub project in a particular location. There can be several instances in or across locations for a particular project.

EZ Manage also has a separate section for managing your success stories.

Success stories is a cleaver way to keep track of all the successful tasks taken up with respect to individuals.

For eg: Successfully getting a girl child go to school would have an entry into this section. This will help keep track of such success stories for every project and sub project.

EZ Manage is truly easy manage right down to the code that was written to create it.

EZ Manage has optimal amount of documentation in the code, but mostly the function names say what they do.

Every android java class activity is associated with its related XML file with a alphanumeric code.

Eg: Java class : AddNewProjectActivity_4a
has its related XML file as
activity_4a_add_new_project.xml

The following is the future plan for Easy Manage:

Bring in Analytics to derive new relations between your data.

Implement all remaining database functionalities.

Host DB on server and integrate with EZ Manage.
